

Governance & Policy

The Governance & Policy Department sits at the core of ICHAI's mission to advance responsible, human-centred artificial intelligence. This department works closely with governments, regulatory bodies, institutions, and organisations to develop, interpret, and implement AI governance frameworks that promote accountability, transparency, and ethical integrity. It provides expert guidance on policy development, regulatory alignment, and compliance with emerging global AI standards.

Whether you are seeking support in designing AI governance structures, interpreting ethical principles, or aligning your organisation with international best practices, this department offers tailored advisory services grounded in research and real-world application. The team also engages in cross-border policy dialogue, helping institutions navigate complex regulatory environments while ensuring that AI systems remain aligned with societal values and human rights.

This department is ideal for institutions looking to strengthen oversight, ensure compliance, and embed responsible AI practices at both strategic and operational levels.
