

Partnerships

The Partnerships Department is responsible for building meaningful, long-term collaborations that advance ICHAI's global mission. This team works with governments, academic institutions, corporations, non-profits, and international organisations to create strategic alliances that drive innovation, knowledge exchange, and responsible AI adoption.

Through carefully structured partnerships, ICHAI supports joint initiatives, co-developed programmes, research collaborations, and cross-sector engagement. The department is particularly focused on fostering relationships that bridge the gap between policy, technology, and societal impact. Whether you are exploring collaboration on a research project, seeking institutional alignment, or looking to participate in global AI initiatives, the Partnerships team will guide you through a structured engagement process.

This department also supports international expansion efforts, ensuring that ICHAI's work is locally relevant while maintaining global consistency. Organisations seeking to collaborate, co-create, or contribute to a broader AI ecosystem will find this department to be a key point of contact.
