Research & Knowledge Exchange

The Research & Knowledge Exchange Department serves as a hub for intellectual collaboration, thought leadership, and evidence-based insight. This department works with academics, researchers, think tanks, and institutions to explore critical issues at the intersection of artificial intelligence, society, ethics, and governance.

Through collaborative research initiatives, publications, and knowledge-sharing platforms, ICHAI contributes to the global understanding of AI's impact and its responsible use. The department facilitates partnerships that encourage interdisciplinary approaches, combining technical, ethical, and social perspectives.

It also supports the dissemination of research through reports, white papers, and policy briefs, ensuring that insights are accessible and actionable for decision-makers. Experts interested in contributing to research, participating in studies, or co-authoring publications are encouraged to engage with this department.

This is the ideal contact point for those seeking to contribute to or benefit from a growing body of knowledge shaping the future of human-centred AI.
